

BPU

BUNDLE PERFORATION UNIT

Foil perforation for a comfortable bundle unwrapping experience.

**EASY AND
COMFORTABLE
HANDLING**

Bundle Perforation Unit BPU - For all common bundle packaging machines.

The **B**undle **P**erforation **U**nit has been developed to perforate the foil of naked overwrapped bundles with lines of holes to offer customers a comfortable bundle opening experience through easy snapping of the overwrapped foil.

Due to the perforation by the **BPU** expensive tear tape will not be needed for unwrapping the bundle.

Depending on the number of packs a bundle consists of, the **BPU** can be equipped with 2, 3 or 4 needle rollers for accurate perforation.

The **B**undle **P**erforation **U**nit will be installed with one supporting arm at the bundle packer, close to the foil bobbin and is designed to be installed in almost all common bundle packaging machines.
